

“Professor Moore provides an unusually sophisticated analysis of the problem of the causes of war; he draws together and interprets many diverse literatures. His ‘incentive theory’ – carefully but persuasively stated – will stimulate fresh thought and contribute to scholarship and intelligent discussions.”

--PROFESSOR ALEXANDER L. GEORGE, *Stanford University, Department of Political Science*

“Incentives Matter. The explanatory power of this simple principle is universal over all behavioral domains, including war and peace. This hitherto neglected extension becomes the focus of inquiry in this book.”

--PROFESSOR JAMES M. BUCHANAN, *Nobel Lauriat in Economics*

“This is an important book. Science and technology, along with the blessings they bring us, make continuing brutality an ever present ingredient of international tensions and conflicts. We must reverse that trend. It is time to end the easy pattern of war and replace it with a movement for democracy and human dignity. This book shows us how.”

--AMBASSADOR MAX KAMPELMAN, *former head of the U.S. delegation to the Conference on Security and Cooperation in Europe and recipient of the Presidential Medal of Freedom*

“Solving the War Puzzle” is that rare national security policy book; an insightful examination of the theory and causes of war grounded in rigorous scholarship but tempered by the author's real world experience of statecraft. His contributions to American foreign policy successes in recent decades give real authority to new frameworks he puts forward for the development of successful policy on war and peace in the age of terrorism.”

--JOHN F. LEHMAN, *former Secretary of the Navy*

“This is a book that should be widely read and debated. It challenges classical ‘realist’ and ‘idealist’ traditions – not through ideological criticism but by building bridges between them. It is a provocative, constructive effort to address the central questions of the last century and, all too possibly, the next: Why do wars happen? How can they better be prevented? And how can the promotion of democracy contribute? Read it – and urge others to, as well.”

-- PROFESSOR ANTHONY LAKE, *Edmund A Walsh School of Foreign Service, Georgetown University, and former Assistant to the President for National Security Affairs*

“John Norton Moore has given us a remarkable and creative synthesis of the empirical and theoretical knowledge about war. Strong supporters of both democracy and deterrence will be pleased to learn that they are thereby fostering peace as well.”

--R. JAMES WOOLSEY, *former Director of Central Intelligence*
